Commercial treadmill (LED Screen)

Product Specifications

- Power: 3.0Hp (2.2kw)
- Speed Range: 1-20km/h
- Incline Range: 0-20%
- Overall Dimensions: 2200×910×1615mm
- Running Area: 1530×580mm
- Maximum Weight Capacity: 150kg

1. Incorporating advanced European high-tech technology, the product aligns internationally, showcasing luxury and dominance.
2. The signal transmission system adopts internationally leading digital signal transmission, ensuring more precise treadmill control and eliminating occurrences of sudden stops and runaway phenomena.
3. Uses a 100mm diameter treadmill roller to solve technical challenges, extending the lifespan of the motor and roller, and reducing noise.
4. The entire machine features anti-static design and unique anti-electromagnetic design, ensuring comprehensive exercise safety.
5. Specially designed treadmill rollers effectively prevent belt deviation, enhancing product stability during use.
6. Utilizes ultra-high-strength columns and oversized handrails to improve product stability and exercise steadiness, showcasing luxurious and atmospheric product design.
7. Anti-slip design on both sides of the treadmill enhances user comfort while standing, demonstrating meticulous and user-friendly product design.
8. The emergency stop button on the treadmill is uniquely designed to extend its lifespan, ensuring your members have the best running experience.

Commercial spin bike

1. All use elliptical tubing for a more unified and aesthetic appearance.
2. Abandoning the sleeve-type seat adjustment, using a slide rail-type seat adjustment to reduce the exposed chrome-plated parts of the bike, preventing corrosion and rust from sweat, and bringing greater maintenance pressure to clubs.
3. The new bike has made improvements to the adjustment knobs on the handlebars and seat. The new adjustment knobs are more sturdy, durable, aesthetically pleasing, and have a lower failure rate. The previous bike's sweat guard consisted of three plastic plates fixed separately on the bike frame, especially the front one, which looked very poor in appearance and was similar to a bicycle mudguard. Moreover, this front guard plate was not fixed with screws but hung on the frame, making it very easy to fall off and damage. However, the sweat guard of the new bike is developed from a single mold, presenting a unified whole. Not only does it provide effective sweat protection, but it also enhances the overall aesthetics.
